FOR IMMEDIATE RELEASE

MVNO.SERVICES Granted License to Shake Up Thailand's Mobile Market

Bangkok, Thailand – December 09, 2024 – MVNO.SERVICES Co., Ltd. ("MVNO.SERVICES"), a groundbreaking joint venture designed to transform Thailand's mobile service sector, has been granted a mobile virtual network aggregator (MVNA) license by Thailand's National Broadcasting and Telecommunications Commission (NBTC).

MVNO.SERVICES – a joint venture between Compax Software Development PTE Ltd., the software arm of Compax Digital Group ("Compax Digital"), and Thailand's AGTR Group Co., Ltd., is officially registered as a mobile virtual network aggregator (MVNA) and enabler (MVNE) company in Thailand.

Enabling a New Era of Mobile Services in Thailand

Armed with its newly awarded license, MVNO.SERVICES is now working to secure access agreements with network operators in the country. This is the foundation for its innovative end-to-end platform designed to empower businesses and organizations to launch and operate their own mobile services as mobile virtual network operators (MVNOs).

Aligned with National Telecom Reform Goals

The establishment of MVNO.SERVICES is directly aligned with the NBTC's urgent policies to enhance competition and reduce telecom costs in the market. A key component of these policies was the creation of a seamless MVNA/MVNE platform to lower barriers for new MVNO entrants.

A Game-Changer for Businesses and Consumers

Through MVNO.SERVICES' platform, brands, communities and companies across various industries can seamlessly integrate mobile services into their existing operations. This will enable them to strengthen customer engagement, unlock new revenue streams, and deliver tailored, customer-centric telecom services, enhancing the overall user experience.

Executive Perspective

"The MVNA license granted by the National Broadcasting and Telecommunications Commission (NBTC) marks a major milestone on our journey to enable companies to extend their reach into mobile services," said Leopold Kojeder, CEO of Compax Digital Holding. "By becoming MVNOs, companies and brands can offer a more holistic customer experience and unlock new revenue streams, aligning with the NBTC's policies for a more competitive and dynamic mobile market."

Shaping the Future of Telecom in Thailand

As MVNO.SERVICES advances toward launching its platform, it is poised to play a pivotal role in modernizing Thailand's mobile market. By fostering competition and delivering innovative solutions, the company is set to unlock value for businesses and consumers alike.

End Of Press Release

About MVNO.SERVICES

MVNO.SERVICES provides a full turnkey solution that significantly reduces the costs, time and complexity of launching and operating successful MVNOs. MVNO.SERVICES include ongoing support from local market experts and seasoned MVNO specialists, telecom network connectivity, along with a flexible state-of-the-art technology platform to make MVNOs run smoothly and successfully.
